

SolarMax Energy Systems

182mm monocrystalline PERC modules

Overview

What is PERC monocrystalline solar panel?

PERC monocrystalline solar panel is the latest technology and powerful solar panel. It uses PERC cells which are considered to be the latest invention in the solar field. PERC stands for Passivated Emitter and Rear Contact.

What is a monocrystalline PERC cell?

A monocrystalline PERC cell is a more advanced version of the mono cell. It uses additional layers on the rear side of the cell to help capture more energy and increase efficiency.

How many watts can a 182mm PERC solar panel produce?

Laser SE combined with PERC technology makes 182mm solar cell rated power up to 7.58W at 23% efficiency. 72 pieces of 182mm Mono PERC solar cells combined with half-cut technology can make solar panels with power up to 545 watt. High power solar panel helps lower the BOS cost of solar PV system. [Product description](#) 1.

Are mono-crystalline panels cheaper than PERC modules?

In terms of cost, mono-crystalline (standard) panels are slightly cheaper compared to perc modules. The extra cost associated with the use of passivated layers in mono-perc modules increases the overall pricing. However, if we compare price with per unit of energy produced – then it is the same for both modules.

How many watts can a mono PERC solar panel produce?

72 pieces of 182mm Mono PERC solar cells combined with half-cut technology can make solar panels with power up to 545 watt. It is beneficial for lowering the BOS cost of solar power system. [Process flow](#) [Key features](#).

What are the characteristics of 182mm solar cell?

1. Type : Monocrystalline Solar Cell (182mm X 182mm, Diameter 247mm) 2. Geometrical properties ① Shape of Solar Cell : pseudo-square with rounded corners ② Length of wafer edge : $182 \pm 0.25\text{mm}$ ③ Length (corner to corner) : $247 \pm 0.25\text{mm}$ 3. Power of 182mm solar cell

182mm monocrystalline PERC modules

182 Single Glass Module Series

The series integrates 182mm large-size silicon wafers increases the wafer size, optimizes the layout profoundly and decreases the invalid power generation area.
