

## SolarMax Energy Systems

# 32650 Assembled Outdoor Power Supply

## Overview

---

What is a 32650 LiFePO4 battery?

A 32650 LiFePO4 battery refers to a specific type of lithium iron phosphate (LiFePO4) battery in a cylindrical form factor with dimensions of 32mm in diameter and 65mm in height. These batteries are renowned for their safety, long lifespan, and efficient energy storage, making them ideal for various high-demand applications.

What is a 32650 battery used for?

32650 batteries can be used in various assemblies where such batteries are connected in parallel. In such batteries, power is added, which allows them to be used to power various electric machines. Individual products can be used with powerful LED flashlights, children's toys or portable audio devices.

How many volts does a 32650 battery take?

Overdischarge: 2.5 Volts. The presence of the controller allows more safe operation of the 32650 battery. The absence of overloads also has a positive effect on the life of the product. The 32650 battery has almost no full analogues, but you can try to replace elements of this type with other products with similar characteristics.

What is a 32650 lithium NMC battery?

Li nmc batteries of this form factor may also vary in quality and capacity, so you need to carefully select new products. 32650 batteries can be used in various assemblies where such batteries are connected in parallel. In such batteries, power is added, which allows them to be used to power various electric machines.

What is the difference between a 32650 and a 18650 battery?

The 32650 battery has almost no full analogues, but you can try to replace elements of this type with other products with similar characteristics. The

length of such a power source is fully consistent with Battery 18650, but the diameter of such a product will be exactly two times smaller.

How many charge-discharge cycles does a 32650 battery have?

The number of charge-discharge cycles: 2500. The power supply of this size has built-in protection with the following thresholds: Overcharge: 4.3 Volts. Overdischarge: 2.5 Volts. The presence of the controller allows more safe operation of the 32650 battery. The absence of overloads also has a positive effect on the life of the product.
