

## SolarMax Energy Systems

# 5G base station costs and electricity costs

## Overview

---

How much does a 5G base station cost?

[Click Here To Download It For Free!](#) Setting up a 5G base station is expensive, with costs ranging from \$100,000 to \$200,000 per site. This price includes hardware, installation, site rental, and maintenance. Urban areas often have higher costs due to land prices and infrastructure challenges.

Are 5G base stations causing more energy consumption?

However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption. The carrier is seeking subsidies from the Chinese government to help with the increased energy usage.

How much power does a 5G station use?

The power consumption of a single 5G station is 2.5 to 3.5 times higher than that of a single 4G station. The main factor behind this increase in 5G power consumption is the high power usage of the active antenna unit (AAU). Under a full workload, a single station uses nearly 3700W.

Will 5G cost more than 4G?

Estimates suggest that operating expenses (Opex) for 5G will be 30-50% higher than for 4G. This increase is due to higher energy consumption, increased site maintenance, and the complexity of managing a dense network of small cells and new frequency bands.

Does China Mobile have a 5G base station?

China Mobile has tried using lower cost deployments of MIMO antennas, specifically 32T32R and sometimes 8T8R rather than 64T64R, according to MTN. However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption.

How much does it cost to upgrade to 5G?

Upgrading existing 4G sites to 5G costs between \$20,000 and \$50,000 per site. Instead of building entirely new sites, many telcos upgrade existing 4G towers to 5G, which costs between \$20,000 and \$50,000 per site. This is a more cost-effective approach, as it utilizes existing infrastructure.

## 5G base station costs and electricity costs

---

### Power to the 5G people

Some estimates suggest that energy costs for existing 4G LTE networks could double for 5G infrastructure that needs to provide the same coverage in an equivalent sized area.
