5G base station new wind power supply design

Overview

How do engineers design 5G base stations?

Engineers designing 5G base stations must contend with energy use, weight, size, and heat, which impact design decisions. 5G New Radio (NR) uses Multi-User massive-MIMO (MU-MIMO), Integrated Access and Backhaul (IAB), and beamforming with millimeter wave (mmWave) spectrum up to 71 GHz.

How will 5G affect power supply design?

Higher bandwidths and compression techniques will let 5G networks shuttle more data through systems in a given period, leaving more power-saving idle time. In light of this, the move to 5G infrastructure is necessitating new power supply design considerations.

What is a 5G power supply?

The equipment ensures that devices across the infrastructure stack receive reliable power from the mains network, wherever they happen to reside. With it, individuals and organizations can continue to render services to both themselves and their customers. Overviews The 5G network architecture uses multiple types of power supplies.

Is re a suitable power supply for 5G communication networks?

Limited space and far few PV modules are required in 5G systems. Thus, RE is a desirable power supply for such communication networks. The RE sources to power individual SCBSs may face geographical issues.

What is a 5G backhaul power supply?

The backhaul part of the 5G network connects the access interface - including masts, eNodeB, and cell site gateway - to the mobile core and internet beyond. And just like the access equipment, it too has specific power supply requirements. Backhaul power supplies must cater to aggregation routers and core routers.

What is the access side of the 5G stack?

The access side of the 5G stack includes user equipment such as smartphones, tablets, laptops, and desktop devices. Devices in this part of the stack require power supply equipment that can operate at room temperatures indoors and protect sensitive electronics - already a well-developed area.

5G base station new wind power supply design

5G macro base station power supply design strategy and ...

Therefore, Cheng Wentao recommends that power design engineers familiarize themselves with new material devices and high-frequency design as soon as possible, and ...
