

## SolarMax Energy Systems

# Annual production of 3GWh energy storage batteries

18650 CELL

18650 Battery Pack 2S1P

18650 Battery Pack  
4S1P

## Overview

---

After the first phase of the project is put into operation, it will form a production line with an annual output of 300 million watt-hours of lithium (sodium) batteries and PACKs for large cylindrical energy storage, with an estimated annual output value of 3.5 billion yuan. How many GW of battery storage capacity are there in the world?

Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for electricity access, adding a total of 42 GW of battery storage capacity globally.

What is the global battery supply chain?

While the global battery supply chain is complex, every step in it – from the extraction of mineral ores to the use of high-grade chemicals for the manufacture of battery components in the final battery pack – has a high degree of geographic concentration.

Why is battery energy storage important in 2022?

As the world transitions to greener sources of power generation such as solar PV and wind, battery energy storage developments will be critical in meeting future energy demand. Global BESS capacity additions expanded 60% in 2022 over the previous year, with total new installations exceeding 43 GWh.

How will battery development impact China's Energy Future?

China is committed to peaking its emissions by 2030 and sees battery developments as a steppingstone to achieving that goal. The country's clean energy development will accelerate in the coming years, increasing the share of renewables in its power mix.

What percentage of lithium-ion batteries are used in the energy sector?

Despite the continuing use of lithium-ion batteries in billions of personal devices in the world, the energy sector now accounts for over 90% of annual

lithium-ion battery demand. This is up from 50% for the energy sector in 2016, when the total lithium-ion battery market was 10-times smaller.

Why is battery use growing in Africa?

Battery use is also growing in emerging market and developing economies outside China, including in Africa, where close to 400 million people gain access through decentralised solutions such as solar home systems and mini-grids with batteries in order to achieve universal access by 2030.
