Application scenarios of communication base station inverter grid-connected equipment

Overview

What is a grid following inverter?

to extract the maximum available power at any time and feed the extracted power into the grid. The inverters used in IBRs are generally designed to follow the grid volt-ages and inject current into the existing voltage. Therefore, they are known as grid following inverters (GFLIs).

How a photovoltaic inverter communicates with a power station?

Commonly used communication technologies for inverters As the brain of the entire power station, the photovoltaic inverter can transmit the collected power station operation data to the communication hardware.

What is a grid-supporting inverter?

IBRs that operate in the grid supporting mode are known as grid-supporting inverters (GSIs). Almost all the large-scale IBRs work as GSIs, and small-scale IBRs, typically below 5 MW, operate as GFDIs. The fundamental difference in grid interaction of GFMIIs come from the way active and reactive power delivery to the grid is controlled.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

What is a grid forming inverter?

In the islanded mode, one of the inverters, or a couple of them, should function as volt-age and/or frequency regulator(s) to form a local power grid. The concept of grid forming inverters (GFMIIs) originated from this particular need.

What are grid following inverters (gflis)?

The inverters used in IBRs are generally designed to follow the grid volt-ages and inject current into the existing voltage. Therefore, they are known as grid following inverters (GFLIs). The common technique used to synchronize with the grid volt-age is the use of a phase-locked loop (PLL).
