

## SolarMax Energy Systems

# Are North African energy storage projects green

## Overview

---

### Should North Africa Invest in green hydrogen?

With high renewables potential that can be tapped at low costs, and geographical proximity to Europe where demand for renewables-based or green hydrogen is rising, many North African countries have entered into agreements with other countries and private companies to explore pilot projects for green hydrogen production and exportation.

### Why should Africa Invest in energy storage?

If Africa is to sustain its growth in renewable energy and create benefits for its population, implementing storage solutions becomes an imperative. Robust investment in storage will help to integrate different forms of energy into the grid seamlessly, thus promoting stable and uninterrupted power supply.

### Where does North Africa Invest in renewables?

So far, most of the investments are concentrated in Morocco and Egypt. Contrary to the global trend in the period of 2013-2020 which shows private sector financing as the primary source of funding for renewables development, North Africa sees public finance play a far more important role.

### Why is renewable electricity so important in North Africa?

Over the last decade, renewable electricity in North Africa has grown more than 40%, driven by the rapid expansion of wind, solar photovoltaic and solar thermal. Renewables play a minor role in the transport sector across the region, with still few electric vehicles that can use renewable power and low levels of biofuels.

### Could green hydrogen help North Africa export ammonia and fertilizers?

Already, North Africa is a powerful exporting bloc of ammonia and fertilizers, and using green hydrogen to transition away from the capital- and emissions-intensive Haber-Bosch process which uses methane or coal as feedstocks for

ammonia production—towards green ammonia could support the region's export potential and energy storage capacity.

How is the energy crisis affecting North Africa?

The crisis is affecting energy systems around the world, and presents North African countries with an imperative to re-evaluate energy strategies and accelerate clean energy transitions in planning their economic recovery.
