

## SolarMax Energy Systems

# Assembling a 4 8 kWh outdoor power supply

**LFP 12V 200Ah**

## Overview

---

How much power does a solar power kit provide?

With 16.2 kWh of stored energy, 4.8 kW of solar for re-charging, and the ability to deliver 8,000 watts of power at once during an outage, this solar power kit will keep you running indefinitely during a power outage without breaking the bank.

How to choose a portable power station for camping?

Setting one up inside a home or workshop means close quarters, and loud models could literally require hearing protection. A portable power station for camping should also be quiet, or else it may disturb the neighbors. Typically, electric and solar power stations make for the quietest generators available.

What is the power output of a portable power station?

Power output of a portable power station refers to the maximum amount of energy the station delivers to the attached devices. Power output ratings are available in terms of wattage. How many watts a device will deliver explains how much power it can produce. The more watts a device can produce, the larger the electrical component it can run.

Do portable power stations need a wall outlet?

Portable power stations typically come equipped with lithium-ion batteries that hold a significant amount of stored electrical energy. Most power stations plug directly into a standard electrical outlet, but many models don't require access to a wall outlet.

What kind of outlets do solar generators need?

You get to decide which sockets and outlets you'll need and include items you may not find on the Walmart models. That said, typical outlet layouts on solar generators would include high-voltage AC outlets, low-voltage cigarette lighter-type outlets, USB ports, and high-load Anderson quick-connect type sockets.

How many Watts Does a power station use?

A station with 1,000 watt-hours can power a 1-watt device for 1,000 hours, or a 400-watt device for 2.5 hours. Generally speaking, smaller power supplies use milliamp-hours while the most powerful portable power station supply units use watt-hours.
