Assembly of a flow battery

Overview

A flow battery, or redox flow battery (after), is a type of where is provided by two chemical components in liquids that are pumped through the system on separate sides of a membrane. inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circulate in their respective spaces.

Assembly of a flow battery

What is a Flow Battery: A Comprehensive Guide to

In a flow battery, the anode side of the battery holds an electrolyte with a metal ion in a lower oxidation state. As the battery discharges, an oxidation reaction occurs at the ...
