

**SolarMax Energy Systems**

# **Austria high-performance energy storage battery**

**Deye inverters and Deye batteries  
are more compatible.**

## Overview

---

NGEN commissioned Austria's largest battery energy storage system (BESS). It installed it in record time – just seven months. Located in Fürstenfeld, in the country's southeast, the facility has 24 MWh in capacity and a maximum output of 12 MW. How many photovoltaic battery storage systems are there in Austria?

Of these, approx. 94% were built with public funding and 6% without. The total inventory of photovoltaic battery storage systems in Austria therefore rose to 11,908 storage systems with a cumulative usable storage capacity of approx. 121 MWh.

Does Austria have a market for energy storage technologies?

A study 1 carried out by the University of Applied Sciences Technikum Wien, AEE INTEC, BEST and ENFOS presents the market development of energy storage technologies in Austria for the first time.

How big is Austria's hydraulic storage power plant capacity?

In 2020, Austria had a historically grown inventory of hydraulic storage power plants with a gross maximum capacity of 8.8 GW and gross electricity generation of 14.7 TWh. This storage capacity has already played a central role in the past in optimising power plant deployment and grid regulation.

How many tank water storage systems are there in Austria?

A total of 840 tank water storage systems in primary and secondary networks with a total storage volume of 191,150 m<sup>3</sup> were surveyed in Austria. The five largest individual tank water storage systems have volumes of 50,000 m<sup>3</sup> (Theiss), 34,500 m<sup>3</sup> (Linz), 30,000 m<sup>3</sup> (Salzburg), 20,000 m<sup>3</sup> (Timelkam) and twice 5,500 m<sup>3</sup> (Vienna).

How does a heat pump work in Austria?

Activated components and buildings are usually heated and/or cooled with

heat pump systems. As of 2015, heat pumps in Austria have been equipped with a corresponding smart grid interface. In total, this amounted to approx. 121,200 buildings at the end of 2020 with a maximum load shift potential of approx. 0.43 GWhel per hour of shifting time.
