Barbados has high requirements for new energy storage

430KWH

ESS Cabinet
All in One

Overview

Barbados Light & Power Company's technical assessments have revealed that the currently approved 15 MW of battery energy storage systems (BESS) possesses the capability to maintain grid stability only up to a maximum of 99.9 MW of total installed distributed photovoltaic (DPV) systems. 12 As of August 1, 2024, the cumulative capacity of DPV systems connected to the grid was nearing this threshold, reaching almost 100 MW. 12 This near-capacity situation has a direct and immediate consequence: no additional renewable energy customers can be connected to the grid until further BESS capacity is brought online. 12 This bottleneck in grid connectivity poses a significant impediment to the continued expansion of renewable energy generation within Barbados, potentially affecting homeowners and businesses eager to adopt cleaner energy solutions. 14
