Base Station and Communications

Overview

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and wireless router.

Base station (or base radio station, BS) is – according to the 's (ITU) (RR) – a " in the ."A base station is.

In communications, a base station is a communications station installed at a fixed location and used to communicate as part of one of the following:• a system, or;• a .

In the context of external land surveying, a base station is a receiver at an accurately-known fixed location which is used to derive correction information for nearby portable GPS receivers. This correction data allows and other effects to be.
