Battery Energy Storage in Norway

Overview

Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. “There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It’s the key to turning intermittent wind and solar into a stable energy source,” explains Pål Runde, Head of Battery Norway.

What is Norway's battery strategy?

from fossil to renewable energy in Norway and abroad. The battery strategy forms part of the Government’s Green Industrial Initiative, and the value chain or batteries is one of seven pillars in this initiative. The others are the value chains for offshore wind, hydrogen, carbon capture and storage (CCS).

How big is Norway's battery market?

batteries for stationary energy storage - a market expected to reach EUR 57 billion by 2030. Now, a more mature Norwegian battery industry has greater potential to accelerate the renewable energy transition in Europe. Today Norway has not one, but two huge battery markets.

How much does a battery cost in Norway?

ccount for around 10% of the value of Norwegian exports. In a few years, the price of battery energy storage systems (BESS) will typically be between USD 150/kWh and USD 250/kWh (currently USD 300–500/kWh), which means that if 25% of the Norwegian battery cell production went to BESS for domestic/export purpos.

Is Norway a battery region?

As a battery region, the Nordics have become a notable actor in the broader European battery market. They have also joined forces on global projects, such as the export of energy storage systems to Egypt and Lebanon. “The rest

of the world understands that Norway is an important player in all things battery.

Is Norway a good place to recycle batteries?

Norway, with its strong expertise in processing industry, has a great opportunity to take a leading role within recycling of batteries and developing new and more efficient processes for recycling of all battery materials. – Today, graphite is not recycled, and ends up as CO₂-emissions.
