Battery cabinet parallel current size

Overview

The basic concept is that when connecting in parallel, you add the amp hour ratings of the batteries together, but the voltage remains the same. For example: two 6 volt 4.5 Ah batteries wired in parallel are capable of providing 6 volt 9 amp hours (4.5 Ah + 4.5 Ah).

It's possible that the instantaneous current at the start of acceleration is carried mostly by one cell, not both equally. If so, that current could melt a thin wire used to parallel cells.
