

## SolarMax Energy Systems

# Battery foundation for residential rooftop communication base stations

## Overview

---

Which battery is best for a telecom base station?

REVOV's lithium iron phosphate (LiFePO<sub>4</sub>) batteries are ideal telecom base station batteries. These batteries offer reliable, cost-effective backup power for communication networks. They are significantly more efficient and last longer than lead-acid batteries.

Why should you use a battery for a communication network?

These batteries offer reliable, cost-effective backup power for communication networks. They are significantly more efficient and last longer than lead-acid batteries. At the same time, they're lighter and more compact, and have a modular design – an advantage for communication stations that need to install equipment in limited space.

What kind of batteries does revov offer?

REVOV supplies automotive-grade lithium iron phosphate (LiFePO<sub>4</sub>) batteries – the highest available grade of lithium battery, originally designed for use in electric vehicles. We offer both LiFe and 2<sup>nd</sup> LiFe lithium iron batteries for base stations. Our 2<sup>nd</sup> LiFe batteries are repurposed after use in electric vehicles.

Why is a LiFePO<sub>4</sub> battery better than a lead-acid battery?

LiFePO<sub>4</sub> batteries charge faster and have higher capacity. They also offer good performance at high temperature. LiFePO<sub>4</sub> batteries have a DOD of 90% or higher. This is compared to about 50% for a lead-acid battery. In practice, this means that a LiFePO<sub>4</sub> battery supplies power for longer intervals between charging.
