

## SolarMax Energy Systems

# Belarus Industrial Energy Storage Agency

## Overview

---

How many solar energy installations are there in Belarus?

287 solar heating installations with total heat capacity of 3.9 MW th. Hydropower resources in Belarus are deemed scarce, though there are opportunities for small hydro in the northern and central parts of the country.

What technology is used in Belarus?

The technology with the most mature local market is biomass, currently used mainly in heat generation. Belarus is still in the early stages of deploying wind, solar PV and biogas, although the technologies used in their development are considered mature and meet international standards.

Does Belarus have a geothermal potential?

Belarus's geothermal potential is relatively undiscovered, with only a few regions having been tested. Of the tested regions, the most promising geothermal energy potential lies in the Pripyat Trough (Gomel region) and the Podlasie-Brest Depression (Brest region), in dozens of abandoned deep wells.

Can Belarus produce bioenergy from wood residues?

Belarus's potential for producing bioenergy from wood residues is significant, as forests cover about 40% of the country's territory (9.5 million ha), 50% of which is mature solid biomass (wood). Solid biomass resources from waste wood suitable for producing bioenergy include firewood, timber, wood residue and fast-growing grey alder.

How can Belarus improve the environment?

Environmental improvements are to be achieved with new technologies, construction, modernisation of existing infrastructure and industries, and environmental standards and regulations. Belarus is an Annex I Party to the Kyoto Protocol of the UN Framework Convention on Climate Change (UNFCCC).
