

SolarMax Energy Systems

Belgium Service Energy Storage Charging Station

Overview

Why are EV charging stations important in Belgium?

This capability makes these stations particularly valuable for EV drivers who need to charge quickly on the go. One challenge Belgium faces is the relatively low utilisation rate of its DC fast chargers, which typically see only 7-8% use. On average, this means fewer than two charging sessions per day per station.

How much EV charging power is available in Belgium?

As of today, 2.18 TW of EV Charging power are publicly available in Belgium. The graph below shows that fast charging delivering power of 100 kW or more has emerged in the last 12 months. As of 2024, there are 3,162 fast chargers in the country, an impressive 118,97% growth in a short 12-month period.

When will kempower launch a fast-charging station in Belgium?

Under this groundbreaking initiative, Kempower will deliver its charging solutions to the first fast-charging stations of Storm and Q8 in Belgium. The new fast-charging stations, integrated with shops and restaurants, will redefine convenience and accessibility for EV users. The roll-out will take place starting from the summer of 2024.

What is fast charging in Belgium?

As seen on the graph, fast charging accounts for 30% of the total power available in publicly available charging in Belgium as of 2024, its share increasing every year but with a notable growth in 2023. The market has evolved rapidly towards fragmentation, as observed in France. About 60 CPOs are now offering fast charging in Belgium.

What are the best car charging stations in Belgium?

Another standout is Electra, a company that entered the Belgian market in 2023 and quickly became a major player by offering a large number of

charging points with high power capacity. While the availability of ultra-fast charging stations is crucial, the actual charging speed depends largely on the vehicle's ability to handle high power levels.

How much does recharging cost in Belgium?

The cost of recharging varies from €5 to €12 at home, from €15 to €35 at a public charging point and from €25 to €50 on the motorway for a full charge. What are the different types of recharging point available in Belgium?

There are standard terminals (11 to 22 kW), fast terminals (50 kW) and ultra-fast terminals (150 to 350 kW).
