Black double-glass photovoltaic modules

Overview

What are photovoltaic modules?

Photovoltaic modules are made up of a mosaic of solar cells. Here is a description of their main features and of Enel Green Power's innovative solution. There aren't any solar panels at a thermodynamic plant, also known as a concentrated solar power station.

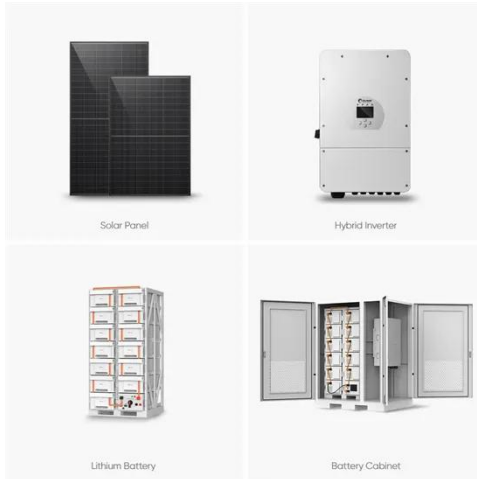

How much power does a dual-glass module use?

"The use of thinner glass reduces the workloads of the installation compared to standard dual-glass products, while withstanding high wind and snow loads." The module features a nominal power of 400 W and a power conversion efficiency of 22.0%. The open-circuit voltage ranges from 44.7 V and the short-circuit current is 10.7 A.

How many volts can a glass-glass solar system run?

The maximum system voltage is 1,500 V. "The guarantee for our glass-glass solar modules is 35 years reinsured by Lloyds group," the spokesperson stated. "The module should be available in the fourth quarter via distribution partners across Europe." Belinus is based in Genk and currently operates in more than ten countries.

Black double-glass photovoltaic modules

Belgian manufacturer unveils 400 W black glass-glass ...

Belgium-based PV module manufacturer Belinus has launched an ultra-black double-glass bifacial heterojunction solar module for residential applications.
