

SolarMax Energy Systems

Botswana Liquid Cooling Energy Storage Management

Lithium Solar Generator: S150

Overview

As electric vehicles (EVs) are gradually becoming the mainstream in the transportation sector, the number of lithium-ion batteries (LIBs) retired from EVs grows continuously. Repurposing retired EV LIB.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

What is a liquid cooling thermal management system?

The liquid cooling thermal management system for the energy storage cabin includes liquid cooling units, liquid cooling pipes, and coolant. The unit achieves cooling or heating of the coolant through thermal exchange. The coolant transports heat via thermal exchange with the cooling plates and the liquid cooling units.

Does liquid cooling BTMS improve echelon utilization of retired EV libs?

It was presented and analyzed an energy storage prototype for echelon utilization of two types (LFP and NCM) of retired EV LIBs with liquid cooling BTMS. To test the performance of the BTMS, the temperature variation and temperature difference of the LIBs during charging and discharging processes were experimentally monitored.

What is liquid cooling BTMS?

The liquid-cooling BTMS consists of pumps, air conditioner, pipes, valves and cooling plates mounted on the sides or bottom of the battery modules. The temperature of the battery modules during charging and discharging processes is experimentally tested. A full-scale thermal-fluidic model of the ESS prototype is established.

Does ambient temperature affect the cooling performance of liquid-cooling

systems?

In the actual operation, the ambient temperature in LIB ESS may affect the heat dissipation of the LIB modules. Consequently, it is necessary to study the effect of ambient temperature on the cooling performance of the liquid-cooling system.

How long is a 5MWh liquid-cooling energy storage cabin?

The layout project for the 5MWh liquid-cooling energy storage cabin is shown in Figure 1. The cabin length follows a non-standard 20'GP design (6684mm length × 2634mm width × 3008mm height). Inside, there are 12 battery clusters arranged back-to-back, each with an access door for equipment entry, installation, debugging, and maintenance.

Botswana Liquid Cooling Energy Storage Management

Liquid-cooling becomes preferred BESS temperature ...

For every new 5-MWh lithium-iron phosphate (LFP) energy storage container on the market, one thing is certain: a liquid cooling system will be ...
