

## SolarMax Energy Systems

# British PVB double-glass photovoltaic modules

## Overview

---

What are the benefits of PV module glazing?

Greater adherence and resistance to imperfections in the glass in the lamination process. Long term light and temperature stability of the module systems based on experience with laminated safety glass. Combination with other functions in PV module glazing, e.g. sound insulating PVB, coloured PVB for design features.

Are double-glass PV modules durable?

Double-glass PV modules are emerging as a technology which can deliver excellent performance and excellent durability at a competitive cost. In this paper a glass-glass module technology that uses liquid silicone encapsulation is described. The combination of the glass-glass structure and silicone is shown to lead to exceptional durability.

What is a double glass c-Si PV module?

Recently several double-glass (also called glass-glass or dual-glass modules) c-Si PV modules have been launched on the market, many of them by major PV manufacturers. These modules use a sheet of tempered glass at the rear of the module instead of the conventional polymer-based backsheet. There are several reasons why this structure is appealing.

What encapsulant materials can be used for PV modules?

Various encapsulant materials can be considered. Polyvinyl butyral (PVB) has been used for a long time for glass-glass PV modules, particularly for thin-film modules.

How do PV installation blocks work?

The installation blocks are designed and placed on the laminate in such a way that they can be bolted onto two brackets with a U-shaped cross section. Each pair of brackets will typically carry several modules, the number of which

depends on the PV system design (Fig. 3).

What is the electrical performance of BYD double-glass modules?

The electrical performance of the BYD double-glass modules was as expected for multicrystalline cells, with power bins ranging from 245W to 265W for 60-cell modules, and from 295W to 315W for 72-cell modules. The modules were subjected to numerous accelerated ageing tests.

## British PVB double-glass photovoltaic modules

---

### Global PVB Double Glass Photovoltaic Module Supply, Demand ...

The global PVB Double Glass Photovoltaic Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).
