Lithium Battery

Container storage system

Power Battery

## Overview

---

Cadmium telluride offers several significant advantages: lower production costs, better performance in hot climates, shorter energy payback time (less than one year), and smaller carbon footprint compared to silicon panels. What are cadmium telluride solar panels?

One of the most significant advantages of cadmium telluride solar panels is their lower manufacturing costs compared to silicon-based alternatives. CdTe panels can be produced for as little as USD 0.46 per watt, which is approximately 70% cheaper than crystalline panels.

Does government support cadmium telluride solar technology?

Government support has played a crucial role in the development and adoption of cadmium telluride solar technology. In the United States, recent legislation has created a more favorable environment for domestic CdTe production and installation.

Does fslr have a cadmium telluride investment thesis?

FSLR's cadmium telluride investment thesis remains robust, despite the intensified pricing competition from Chinese-produced silicon-based solar panels and the former's decelerating backlog growth.

Is fslr's cadmium telluride recycling program Safe?

Combined with the geopolitically secure supply chain, FSLR's cadmium telluride recycling program, and insignificant leaching/ fire risks during extreme conditions, we believe that utility demand may remain robust moving forward, despite the inherent risks from silicon-based solar panel producers as discussed above.

How safe is cadmium telluride?

The approach to CdTe safety in the European Union and China is however, much more cautious: cadmium and cadmium compounds are considered as

toxic carcinogens in EU whereas China regulations allow Cd products for export only. The issue about regulating the use of Cadmium Telluride is currently being discussed in Europe.

Will cadmium telluride-based solar panels withstand hailstorms?

Cadmium Telluride-based solar panels may also gain in adoption, with it typically being able to withstand hailstorms, which has recently damaged thousands of silicon-based solar panels in Texas. Combined with the geopolitically secure supply chain and long-term electrification trend, we believe that FSLR may more than double moving forward.
