# **Can I enter the base station power room**

## Overview

---

How do I install a base station?

The Base Station is the brains and primary siren of your system. It communicates with all of your devices and sends us your alarm signals if you have activated alarm monitoring service. Place your Base Station in a central location in your house. Don't install it on the floor. Plug the Base Station into a power outlet using the included power cord.

Do I need to unplug the base stations?

You don't need to unplug them, just use the steamvr base station settings to let steamvr turn off the base stations. It will also turn them on when launching steamvr. So I watched a YouTube video of a guy who's owned 3 Valve Indexes, 4 Base Stations, and 6 controllers.

Should I Turn Off my base stations?

If you activate your base stations once a day or less, I would turn them off. If you often jump in and out of VR sessions, I'd keep them running. It's similar to HDD motors, as in they are happy to run continuously. But constant on/off can become a problem. Of course. Things don't wear down when they're off.

Does the base station have a battery?

Yes. All of your sensors are battery powered and the Base Station has a built-in rechargeable backup battery that provides power for up to 24 hours during a power outage. How do I add components?

[SimpliSafe.com/alarm-sensors](http://SimpliSafe.com/alarm-sensors).

How many times a day should a base station be powered up?

If it depends on the usage, what is the estimated threshold (e.g. if the Base Stations are powered up 10 times a day it is better to keep them running instead). Please let me know if I can post your reply on Reddit to help other

users as well. Thanks a lot! Steam Support response: Thanks for writing in with your questions.

How long should a base station last?

Base Stations should have a very long life span, even if the power management modes we offer are not used, however. Using the power management features will increase the life span further by leaving the laser and/or rotor disabled (depending upon the mode) when inactive. Feel free to share this if you like.
