# Can a lead-acid battery be used with an inverter

## Overview

---

Do you need a lead-acid battery for an inverter?

While lead-acid batteries are commonly used in cars, you need a lead-acid battery specifically designed for use with inverters to power your microwave, fridge, and other appliances. Inverters provide small amounts of power over a long time and only inverter batteries provide the AC current needed to power your appliances when you are off-grid.

Are acid-lead batteries still commonly used?

Although acid-lead batteries are being replaced by newer lithium battery technology due to disposal issues, acid-lead batteries are still the most popular batteries for inverter use.

What type of current does an inverter battery provide?

Inverters offer small amounts of power over a long time and only inverter batteries provide AC current which is needed to power your appliances when you are off-grid. Lead-acid batteries are also used in cars, but if you want to power your microwave, fridge, and other appliances you need a lead-acid battery specifically for use with inverters.

What are lead-acid batteries used for in homes?

Lead-acid batteries are used in homes to power your microwave, fridge, and other appliances. They are specifically designed for use with inverters, unlike the ones used in cars.

Why are acid-lead batteries difficult to dispose of?

Acid-lead batteries are immensely difficult to dispose of, which is one of the reasons why they are slowly being replaced by newer lithium battery technology. Despite this, acid-lead batteries are still the most popular batteries for inverter use.

What are the different types of solar inverter batteries?

The most commonly used batteries for solar inverters are lead-acid and lithium batteries. Inverter batteries come with different chemistries and technologies, with lead-acid batteries containing four parts made of lead.
