

## SolarMax Energy Systems

# Canada Solar Power Station Energy Storage

## Overview

---

How much solar power does Canada have?

Canada's total wind, solar and storage installed capacity grew 46% in the past 5 years (2019-2024), including nearly 5 GW of new wind, 2 GW of new utility-scale solar, 600 MW of new on-site solar, and 200 MW of new energy storage.

What is the biggest solar power station in Canada?

Top biggest solar photovoltaic power stations in Canada. (Updated September 2024) A photovoltaic power station under construction in Vulcan County, Alberta. When completed in late 2022, it will become the largest photovoltaic power station in Canada.

What is the capacity factor of solar power in Canada?

This, combined with cloudy weather, results in a capacity factor of only 6%, compared to a capacity factor of 15% in America. According to the Canada Energy Regulator (previously the National Energy Board), By 2040, solar power will account for approximately 3% of total energy generation capacity in Canada.

Where is solar power generating in Canada?

Most of the solar power generating potential in Canada is located in the south in Alberta, Saskatchewan, and Ontario. Canada has an overall maximum capacity factor of 6%, compared to 15% in the US. The Canada Energy Regulator (CER) anticipates that solar will form 3% of the country's overall generation by 2040.

Why should you choose Canadian Solar?

As a Canadian company, Canadian Solar takes pride in leveraging its global expertise and capabilities to empower Canadian businesses in transitioning to a sustainable energy future. As global demand for advanced energy solutions continues to rise, e-STORAGE is scaling up production to meet the evolving

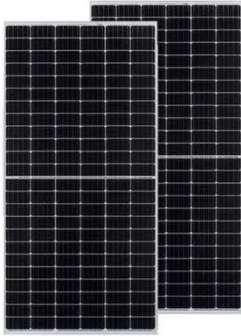

needs of clients and partners.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are tools that store electrical energy. Within Canada, all energy storage projects currently under construction are BESS. Proposed and under-construction projects have a power range between 1 MW and 411 MW, with an average storage capacity range of 0.5 hours to 6 hours.
