

SolarMax Energy Systems

Chad solar wind power generation system

Overview

It is essential to explore the abundant potential of the wind and the possibilities of using the wind and solar energy conversion system as sources of electricity with the aim of meeting the energy needs of Chad.

What energy resources does Chad have?

The majority of its existing capacity comes from diesel, natural gas and heavy fuel oil generation. Chad is living an energy crisis that undermines its development possibilities with extremely limited electricity access (8%). The country is however rich of energy resources, including fossil fuels with strongest solar and wind energy potential.

How fast does wind energy work in Chad?

The global solar radiation varies from 4.5 to 6.5 kWh/m²/d. For the wind energy, the speed of calm winds varies from 4 m/s to 9 m/s from south to north. Our motivation aims to propose hybrid energy systems to resolve the low access rate of electricity in Chad.

How does Chad generate electricity?

Chad currently generates electricity by consuming oil. With the declining cost of new solar generation plants, the Government of Chad and development partners have prioritized solar power throughout the country. Machinery and parts for electricity transmission and distribution are also in demand. Opportunities.

Will a solar PV plant be a 'pioneering project' in Chad?

The European Investment Bank (EBI) described the solar PV plant as a “pioneering project” that “will help liberalise the energy sector, and mobile private investment in Chad.” It is calculated that the cost of electricity will be less than half the current cost of power following the project.

Does Chad have a hybrid energy system?

In this study, the hybrid energy systems are proposed for all the regions that

are not yet electrified in Chad. The National Electricity Company (NEC) of Chad produces and distributes the electricity only in 7 of the 23 regions of Chad; meaning that 16 are un-electrified.

Can solar/wind/diesel/batteries provide electricity in 25 sites of Chad?

assessed the Grid/PV/Wind hybrid energy system viability to provide electricity in 25 sites of Chad . designed a solar/wind/diesel/batteries for three climatic zones of Chad . investigated the feasibility of solar/wind/diesel/batteries for the supply of energy needs of Amjarass (a town in Chad).

Chad solar wind power generation system

Off grid PV/Diesel/Wind/Batteries energy system options for ...

The life cycle cost of hybrid Solar/Diesel/storage systems are less expensive than that of a single Diesel generator. Compared to the system using only fossil fuels, with the optimized hybrid
