China-Europe stacked energy storage battery installation

Overview

Will China add more energy storage capacity in 2023?

InfoLink expects China to add 39 GWh of energy storage capacity in 2023. The U.S. added 8.2 GWh of installed energy storage capacity in the first half of 2023, far behind anticipations. Constructions under the IRA face delays worse than expected.

What are the key market trends for battery storage?

It covers key market trends, with a particular focus on the shift toward utility-scale storage, the continuing growth of residential and commercial installations, and the evolving role of battery storage in supporting Europe's clean energy goals.

What are the key challenges facing battery storage?

It also outlines the key challenges facing the sector, including underdeveloped frameworks and barriers to investment. The study concludes with five policy recommendations designed to accelerate battery storage deployment and ensure energy systems are prepared to integrate high levels of renewable energy.
