Overview

How many 5G base stations will China build in 2025?

China plans to construct over 4.5 million 5G base stations in 2025 while introducing additional policy and financial incentives to support industries expected to shape the next decade, the country's Ministry of Industry and Information Technology (MIIT) announced during its annual work conference.

Who is China Southern power grid?

China Southern Power Grid, together with China Mobile and ZTE, has deployed the industry's first slicing-enabled electric power private network for commercial use in Guangzhou, covering the whole Nansha New Zone with over 100 sites, and has successfully verified over 50 categories of power communication services.

Where is China's largest 5G Smart Grid project now?

According to the State Grid Corporation of China, China's largest 5G smart grid project is located in Qingdao, a coastal city in East China's Shandong province.

What is 5G slicing-enabled private network?

The 5G slicing-enabled private network not only provides high-security resource isolation for services in the power grid production area but also deterministic, low latency and low jitter communication. The grid operator's services involve five links: power generation, transmission, transformation, distribution, and consumption.

What will China do with the 5G push?

Alongside the 5G push, China will also start trials for 10-gigabit optical networks and optimize computing power centers amid an artificial intelligence (AI) boom brought on by ChatGPT.

Who are China's 5G operators?

Chinese main operators are China Mobile, China Telecom and China Unicom. In addition to its expected expansion in the 5G field, China noted that it is also set to begin trials for 10-gigabit optical networks and enhance computing power infrastructure, reflecting the growing demand for artificial intelligence (AI) technologies.
