China independently develops 5G base station to charging cabinet

Overview

How many 5G base stations will China build in 2025?

China plans to construct over 4.5 million 5G base stations in 2025 while introducing additional policy and financial incentives to support industries expected to shape the next decade, the country's Ministry of Industry and Information Technology (MIIT) announced during its annual work conference.

How many base stations will China install in a year?

China's Ministry of Industry and Information Technology (MIIT) set itself an ambitious goal of installing three million of them by the end of the year. Over the last three months, more than 600,000 installations were completed to achieve the target six months prior and leaving the US far behind in absolute numbers of base stations.

Will 5G Revolution & 6G innovation be a priority next year?

The move comes as the country charted its vision for industrial growth during a two-day work conference of the Ministry of Industry and Information Technology. With 4.19 million 5G base stations already in operation, the industry regulator said that "promoting 5G revolution and 6G innovation will be one of the priorities" next year.

Will 5G boost China's economic growth?

Qualcomm, a primary provider of technology for mobile networks, estimates that 5G can potentially enable over US\$13 trillion of economic output and create over 22 million jobs. China made the rollout of 5G networks a vital component of its push to boost economic growth and now boasts nearly three million base stations, according to government data.

Who are China's 5G operators?

Chinese main operators are China Mobile, China Telecom and China Unicom. In addition to its expected expansion in the 5G field, China noted that it is also

set to begin trials for 10-gigabit optical networks and enhance computing power infrastructure, reflecting the growing demand for artificial intelligence (AI) technologies.

What will China do with the 5G push?

Alongside the 5G push, China will also start trials for 10-gigabit optical networks and optimize computing power centers amid an artificial intelligence (AI) boom brought on by ChatGPT.
