Colombian Telecommunication Base Station Wind Power Regulations

Overview

Are Colombia's wind energy plans stalling?

(AP Photo/Ivan Valencia, File) BOGOTA, Colombia (AP) — Colombia's ambitious plans for wind energy development, especially in the resource-rich La Guajira region, are facing serious setbacks as major companies pull out and projects stall, industry experts say.

How much wind power does Colombia have?

Colombia's rich wind and solar energy potential is estimated at 30 GW and 32 GW, respectively, according to SER Colombia, which is more than Colombia's current installed capacity of 18.8 GW. Of particular interest is La Guajira region, with world-class wind resources (average wind speeds of 9.8 m/s) and 18 GW of Colombia's wind power potential.

How can wind and solar energy be used in Colombia?

The expected large deployment of wind and solar resources in Colombia can be used to leverage creation of local employment, gender equality and benefits to local communities and Indigenous peoples. This will require strengthened policy frameworks to avoid negative effects on these areas.

Did Colombia start a wind farm without a regulatory framework?

Diego Patron, manager of the Jemeiwaa Ka'I wind project, a large-scale wind farm cluster in La Guajira, acknowledged the pioneering nature of Colombia's early wind efforts, which began in a regulatory vacuum without clear institutional frameworks.

What is energy policy in Colombia?

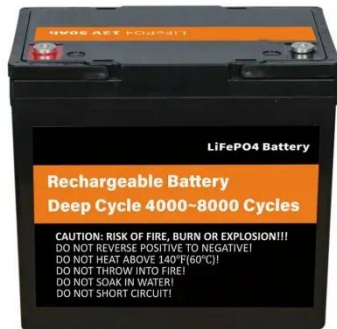

Energy policy in Colombia is defined by the National Energy Plan (PEN) 2020–2050, which includes solar and wind in its different scenarios, including for both grid-connected and unconnected areas. Electricity planning is outlined by the 15-year Generation and Transmission Expansion Plans, which

are updated yearly.

What is the energy transition in Colombia?

The Colombian energy transition is centered around large and small-scale wind and solar power integration that will increase the requirements of flexibility services, inertia and grid expansion at transmission and distribution levels, but also that will make the generation mix even greener.
