

SolarMax Energy Systems

Communication base station inverter equipment has high power consumption

Overview

What is a base station vs a consumer?

consumer is the base station. The power per sub- density in the area covered by the base station. power consumption per user. stations and the backhaul network. For the base 1.5 m. per active user of approximately 3 Mb/s.

What is the impact of base stations?

The impact of the Base Stations comes from the combination of the power consumption of the equipment itself (up to 1500 Watts for a nowadays macro base station) multiplied by the number of deployed sites in a commercial network (e.g. more than 12000 in UK for a single operator).

What is the largest energy consumer in a base station?

The largest energy consumer in the BS is the power amplifier, which has a share of around 65% of the total energy consumption . Of the other base station elements, significant energy consumers are: air conditioning (17.5%), digital signal processing (10%) and AC/DC conversion elements (7.5%) .

Is there a direct relationship between base station traffic load and power consumption?

The real data in terms of the power consumption and traffic load have been obtained from continuous measurements performed on a fully operated base station site. Measurements show the existence of a direct relationship between base station traffic load and power consumption.

How much power does a base station use?

The power per sub- density in the area covered by the base station. power consumption per user. stations and the backhaul network. For the base 1.5 m. per active user of approximately 3 Mb/s. We base station, which includes the PUE overhead. and a range of 340 m. LTE has the highest power largest range, of approximately 470 m. HSPA.

How do base stations affect mobile cellular network power consumption?

Base stations represent the main contributor to the energy consumption of a mobile cellular network. Since traffic load in mobile networks significantly varies during a working or weekend day, it is important to quantify the influence of these variations on the base station power consumption.

Communication base station inverter equipment has high power con

Application of smart power usage on the communication base station

Using intelligent power management technology, it can realize intelligent power supply to communication equipment, providing appropriate power supply according to the actual ...
