Comparison of 5G base stations in Cape Verde

Overview

What frequency does Unitel t+ Cape Verde use?

Unitel T+ Cape Verde uses the GSM 900 MHz (E-GSM) frequency band. This deployment is part of the GSM standard, which operates in the 890 to 915 MHz range for mobile-to-base station transmissions and the 935 to 960 MHz range for base-to-mobile station transmissions.

What is 5G & how does it work?

5G is the fifth generation of mobile phone communications standards. It is a successor to 4G and promises to be faster than previous generations while opening up new uses cases for mobile data.

What is the difference between 4G and 5G?

It is a successor of the 3G and provides ultra-broadband internet access for mobile devices. The high data transfer rates make 4G networks suitable for use in USB wireless modems for laptops and even home internet access. 5G is the fifth generation of mobile phone communications standards.

What are the requirements for a 5G network architecture?

of at least 1.0 Gbps. Network architecture must be based on the Non-Stand Alone (NSA), in order to facilitate the evolution of existing operators' 4G core network to a 5G core network, as well as facilitate interoperability between 4G and 5G networks and between suppliers.

What is the Cape Verde Digital Governance Project?

t, Digital Governance. The Project will support the Government of Cape Verde (GoCV) in its recent efforts to support activities aimed at increasing its capacity to better develop the digital governance plan, in a context of providing clear indications for infrastructure connectivity, notably in the development of a roadmap to implement the 5G sy.

What is a 5G pilot project?

t Model (Activity 2).5G Pilot Project: This strategy may also include the possibility of a plan to implement a 5G pilot project that involves mobile communications operators, companies, application developers, universities and a selection of key public services, allowing them to benefit
