

## SolarMax Energy Systems

# Construction of photovoltaic energy storage station in factory

114KWh ESS

## Overview

---

How does a photovoltaic solar power plant work?

A photovoltaic solar power plant achieves parallel operation with the electrical distribution grid and the possibility of returning excess electrical energy (known as net metering). In addition, considering the free areas on the factory building, this concept was chosen.

What is a photovoltaic (PV) system?

Photovoltaic (PV) Systems: Ideal for general electricity needs and low-energy tasks, these systems are engineered for efficiency and durability. By combining these technologies, manufacturing facilities can create hybrid systems tailored to their unique energy profiles.

What is a roof-mounted Photovoltaic (PV) system?

Roof-mounted Photovoltaic (PV) systems are commonly used in commercial buildings, reaching up to 100kW, and a maximum of 1MW. Industrial PV systems, in the range of (0.5÷10) MW, can be installed on very large roofs. A roof-mounted PV system is an example, as shown in the power plant installed on the roof of the factory GRUNER Serbian Ltd. The main purpose of the solar power plant is to generate electricity.

Can a solar power plant be installed on a large roof?

Solar power plants with a capacity between 0.5 and 10 MW can be installed on very large roofs. For example, a solar power plant with this capacity was installed on the roof of GRUNER Serbian Ltd, with the main purpose of supplying the consumers in the factory and utilizing the excess electrical energy.

What are built-in PV safety features?

Built-in PV safety features are engineered to minimize fire risks in high-combustible factory environments with chemicals, plastics, textiles, or wood,

facilitating swift emergency intervention, and potentially preventing costly financial losses from manufacturing interruptions.
