

SolarMax Energy Systems

Containerized energy storage system lightning protection module

Overview

How to protect high-end electronics in storage containers?

In addition, battery storage for the power grid forms the basis for energy management (so-called “peak shaving”). In order to provide optimum protection for the high-end electronics in storage containers, one needs a comprehensive lightning and surge protection system.

What happens when lightning strikes a storage system?

Distant lightning strikes or so-called indirect lightning strikes lead to conducted partial lightning currents (impulse waveform 10/350 μ s) in the supply lines, or also to induced / capacitive couplings (impulse 8/20 μ s) in the electronic components of the storage system itself (so-called LEMP = Lightning ElectroMagnetic Pulse) (Figure 1).

What is a lightning protection system?

A lightning protection system not only protects the solar PV system but also provides reliable protection to your entire property and assets while safely diverting transient currents to the ground.

What is a container battery storage system?

The container battery storage systems store the power generated, e.g., by photovoltaic systems and wind turbines, and feed it back on demand. Thanks to decentral storage, they also reinforce network stability and can be used by the network operator to provide balanced power.

What are surge protective devices (SPDs) in battery energy storage systems?

Surge protective devices (SPDs) is required in Battery Energy Storage Systems (BESS) BESS systems contain AC/DC converters and battery banks implemented in concrete constructions or in metallic containers.

Which external lightning protection measures are required?

A risk analysis according to IEC 62305-2 is carried out to determine which external lightning protection measures are required, for example, which class of LPS needs to be considered in the planning and implemented in the lightning protection concept.

Containerized energy storage system lightning protection module

Utility-scale battery energy storage system (BESS)

Introduction Reference Architecture for utility-scale battery energy storage system (BESS) This documentation provides a Reference Architecture for power distribution and conversion - and ...
