# Detailed explanation of 5G communication base station wind power equipment

## Overview

---

Can EMC communicate with a 5G network?

However, the communication operator builds the BS to complement the 5G signal, and the establishment of a communication BS does not mean the establishment of a dedicated power wireless network. EMC can also communicate by accessing a normal 5G network but at a reduced reliability and transmission rate.

How many 5G Bs are there in China?

China has deployed 690,000 5G BSs, and the number of terminal connections exceeds 180 million.

How does a base station work?

As shown in Figure S3 each user accesses a base station, and the BS then allocates a channel to each new user when there is remaining channel capacity. If all of the channel capacity of a BS is occupied, a user cannot access this BS and must instead access another BS that is farther away.

## Detailed explanation of 5G communication base station wind power

---

### Research on Offshore Wind Power Communication System

...

In view of the special needs of the communication system, a communication system scheme for offshore wind farms based on 5G technology is proposed.
