

## SolarMax Energy Systems

# Distance between batteries in battery cabinet

## Overview

---

How much space do you need for a battery system?

Spaces about battery systems shall comply with 110.26. Working space shall be measured from the edge of the battery cabinet, racks, or trays. For battery racks, there shall be a minimum clearance of 25 mm (1 in.) between a cell container and any wall or structure on the side not requiring access for maintenance.

What is the minimum clearance for a battery rack?

For battery racks, there shall be a minimum clearance of 25 mm (1 in.) between a cell container and any wall or structure on the side not requiring access for maintenance. Battery stands shall be permitted to contact adjacent walls or structures, provided that the battery shelf has a free air space for not less than 90 percent of its length.

What are the safety requirements related to batteries & Battery rooms?

Employers must consider exposure to these hazards when developing safe work practices and selecting personal protective equipment (PPE). That is where Article 320, Safety Requirements Related to Batteries and Battery Rooms comes in.

What are the requirements for a battery location?

Battery locations shall conform to 480.9 (A), (B), and (C). (A) Ventilation. Provisions appropriate to the battery technology shall be made for sufficient diffusion and ventilation of gases from the battery, if present, to prevent the accumulation of an explosive mixture. (B) Live Parts. Guarding of live parts shall comply with 110.27.

How do you store a battery?

Humidity is another critical factor. Ideal storage conditions should maintain humidity levels below 60% to prevent corrosion and damage. Batteries

exposed to high humidity can develop rust or leaks, which are hazardous. It is also important to store batteries at a partial charge.

Where should a top terminal battery be installed?

Where top terminal batteries are installed on tiered racks, working space in accordance with the battery manufacturer's instructions shall be provided between the highest point on a cell and the row or ceiling above that point. (E) Egress.
