Does Jordan use a lot of outdoor power

Overview

The current output of around 30 million cubic feet (850 thousand cubic metres) per day from the Risha field is used to fuel one nearby power plant, which generates about 10% of Jordan's electricity. Summary Energy in Jordan describes and production, consumption and import in . Jordan is among the highest in the world in dependency on foreign energy sources, with 92.3% of the country's e.

Law No. 13, enacted on April 12, 2012, aims to elevate Jordan's renewable energy share to 7% by 2015 and 10% by 2020, in alignment with the National Energy Efficiency Strategy. This legislation focuses on enhanci.

How much energy does Jordan need?

The limited domestic resources meant that Jordan had to import 7,656 ktoe (thousand tonnes of oil equivalent) of energy to meet its demands. This means that the cost of the consumed energy amounts to as much as 17% of the GDP. In the past, one of the main sources of the imported energy was Egypt, from where Jordan imported natural gas.

What is the energy demand in Jordan?

The rate of increase in energy demand in Jordan is 5% annually and is still rising. Solar and wind energy are among the most important renewable energy sources available in Jordan. The use of energy-saving devices is one of the most important reasons to conserve energy.

Will Jordan get 60% of its energy needs from nuclear energy?

Jordan plans to get 60% of its energy needs from nuclear energy by 2035. According to the JAEC, all evaluations took into account the highest safety requirements, including lessons from the Fukushima incident.

Why is solar energy important in Jordan?

In Jordan, solar energy is the most important renewable energy, as Jordan considers the country of the sun. Jordan has more than 320 sunny days with very high rates of solar radiation, which makes Jordan among the most

fortunate countries in the world in exploiting this energy.

Does Jordan need more electricity?

Since the amount of electricity generated in Jordan has for some years been insufficient to cover the country's needs, additional power used to be imported from Egypt and Syria. However, due to the circumstances in the region, import has been stalled completely (Syria, since 2012) or reduced (Egypt).

Will Jordan be able to generate more electricity by 2030?

It envisions that by the end of 2030, 48.5 percent of the country's electricity generation would come from local energy sources. Jordan has long-term potential for additional RE, enjoying an average of 316 sunny days per year, having wind speeds ranging between 7 and 8.5 m/s, and having large desert areas with a low population.
