

## SolarMax Energy Systems

# Does the energy storage cabinet need to be cooled

## Overview

---

Does an open base cabinet waste a lot of cooling air?

An open-base cabinet sitting only one-quarter inch off the floor can waste a substantial percentage of cooling air even if the air is directed upward initially. A properly planned air path will avoid all “short circuits” or losses by forcing the cool supply air to pass through the components that are to be cooled before reaching the exhaust area.

Do battery back-up systems need to be cooled?

Battery back-up systems must be efficiently and effectively cooled to ensure proper operation. Heat can degrade the performance, safety and operating life of battery back-up systems. Traditionally, battery back-up systems used custom compressor-based air conditioners.

Why are energy storage systems important?

Energy storage systems (ESS) have the power to impart flexibility to the electric grid and offer a back-up power source. Energy storage systems are vital when municipalities experience blackouts, states-of-emergency, and infrastructure failures that lead to power outages.

How can you save money on a cooling system?

You can save considerable time and money by performing early estimations of the location of components in the cabinet, the heat to be dissipated, and the amount of space needed for the enclosure cooling device. Keep it simple. If the ambient air surrounding your enclosure is cool and clean enough, use it – it’s free.

Can a thermoelectric cooling system run on a DC power supply?

A cooling system that operates on a DC power supply such as a thermoelectric cooler would not be susceptible to black-outs or brown-outs, allowing the ambient temperature of the battery back-up system to be kept constant.

Should I use a heat exchanger or an enclosure air conditioner?

Keep it simple. If the ambient air surrounding your enclosure is cool and clean enough, use it – it's free. If the ambient is too hot, dirty, or corrosive, then a closed-loop cooling system will be needed. In this scenario, a heat exchanger is usually a lower-cost choice than an enclosure air conditioner, so consider if it will do the job.
