Overview

What is the European 5G Observatory?

The European 5G Observatory covers the 27 EU Member States, and 20 additional non-EU countries, offering a comprehensive view of 5G developments across Europe and beyond. Why use the European 5G Observatory?

Fifth generation mobile communications (5G) is a key technology for digital communication and thus socio-economic development.

How does Europe compare with other countries in 5G development?

On a range of technical and other criteria, Europe compares well with other leading countries and economies in 5G development, such as the USA, China, Japan, the Republic of Korea, Singapore and Taiwan.

How many people use 5G in Europe?

The State of Digital Communications report published by the European Telecommunications Network Operators' Association (ETNO) states that the uptake of 5G in Europe accounts for only 2.8% of the total mobile connections, compared to 13.4% in the United States and 29.3% in South Korea: despite being available to 62% of the population.

What is 5G & how does it work?

With 5G, communication on the ground is to merge with space for the first time to form non-terrestrial networks, in which satellites can completely take over the role of base stations.

Which country has the best 5G network in Europe?

Within Europe, the Netherlands comes first, followed by Cyprus and Bulgaria. During its Q4 2021 results announcement KPN announced that it has modernized over 4,000 sites to date, and that its 5G network already covers

more than 80% of the population using 700 MHz spectrum.

Which countries are launching 5G in mid (C-band)?

Most recently after much ado, Verizon and AT&T have finally launched 5G in mid (C-band) in an effort to catch up with T-Mobile's 5G performance. Within Europe, the Netherlands comes first, followed by Cyprus and Bulgaria.
