EU standard photovoltaic module panels

Overview

For photovoltaic modules, IEC 61215 certification is essential, verifying their design qualification and type approval. Additionally, IEC 61730 certification ensures module safety qualification, covering electrical and mechanical safety requirements. What is the EU solar standard?

Image: Markus Spiske, Unsplash Members of European Parliament (MEPs) have adopted the EU Solar Standard, which will require the installation of solar on buildings across EU member states. The standard forms part of the European Performance of Buildings Directive, which was provisionally agreed upon in December.

What are the requirements for a European solar installation?

Equipment deployed in European solar installations must meet stringent standards and certifications to ensure safety, reliability, and performance. Solar panels and associated equipment must carry the CE marking, indicating compliance with EU health, safety, and environmental protection standards.

Are solar panels imported or manufactured in the European Union?

Solar panels imported or manufactured in the European Union are subject to various regulations, directives and standards. Ensuring compliance requires that the solar panels meet certain technical requirements. In addition, solar panels must be correctly labelled, documented, and tested.

How does the EU support the European solar PV manufacturing sector?

Over the last years, the EU has taken initiatives to strengthen its support to the European solar PV manufacturing sector, which includes several globally competitive companies in several steps of the value chain.

Will EU members have to install solar panels in public and non-residential buildings?

The legislation says that if technically and economically suitable, EU member

states will have to deploy solar installations progressively in public and non-residential buildings, depending on their size.

What does EU's new solar standard mean for energy sustainability?

EU approves new Solar Standard mandating solar installations on buildings, enhancing energy sustainability across the European Union.
