

SolarMax Energy Systems

Electrical design of power generation container

Overview

What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300–3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

What is a generator container?

These containers are designed to protect the generator from external elements, ensuring secure operation in diverse environments. The generator sets within these containers can vary in size and capacity, making them suitable for a wide range of applications.

What is a 40 ft containerized generator set?

Originally launched for limited markets in 2021, the 40-ft containerized generator sets were engineered for easy transportation, simple installation and are stackable, offering up to 34% space utilization savings over traditional build designs.

Why should you use a containerised generator set?

This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors. Additionally, the container offers increased security against theft or vandalism, making containerised generator sets suitable for applications where equipment safety is a concern.

Why do generators need a container structure?

The robust container structure provides enhanced security and durability to the generator set. This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors.

What are containerized generator / packaged container and enclosure

options?

Containerized generator / Packaged container and enclosure options provide alternatives to installations in existing or new buildings. We have significant experience with pre-packaged container and enclosure solutions for engine-generator sets, balance of plant equipment, and switchgear.
