

SolarMax Energy Systems

Emergency power generation at substations

Overview

What is an emergency mobile substation?

Specifically designed for rapid deployment in response to unexpected power outages, emergency mobile substations provide immediate relief by quickly restoring power. They are commonly used after natural disasters, accidents, or other events that disrupt power.

Why do we need Mobile substations?

Redundant power sources, protection systems, and other critical components boost the reliability of mobile substations, making them better suited to handle continuous operation in high-demand or critical applications. Mobile substations are a highly adaptable solution for modern power distribution challenges.

What are the components of a substation?

Components: Includes transformers, cooling systems, switchgear, metering systems, protection relaying systems, auxiliary power supplies, surge protection, and cable connections. Benefits: Offers mobility, flexibility, reliability, and cost savings over conventional substations.

What is a temporary mobile substation?

Temporary mobile substations are deployed when there is a planned interruption or maintenance of existing substations, or when new construction or power upgrades are underway. These substations prevent service interruptions by taking over the role of the permanent substation for a specific time frame.

What is a modular switchgear in a mobile substation?

The switchgear enables the routing of electricity within the substation and allows isolation of faults without affecting the entire system. Modular switchgear solutions in mobile substations support multiple configurations,

ensuring compatibility with varying power systems.

Are power generating stations a risk category 4 emergency backup facility?

Power-generating stations and other public utility facilities requires as emergency backup facilities for Risk Category IV structures. Are sufficient to pose a threat to the public if released². Aviation control towers, air traffic control centers and emergency aircraft hangars.

Emergency power generation at substations

Mobile & Containerized Substations

Mobile Substations are fully integrated, transportable power solutions mounted on trailers or skids, designed for temporary or emergency power supply.
