

## **SolarMax Energy Systems**

# **Energy Storage Battery Procurement Project**

## Overview

---

What is a battery energy storage system checklist?

Checklist provides federal agencies with a standard set of tasks, questions, and reference points to assist in the early stages of battery energy storage systems (BESS) project development.

What is the general contracting structure for a battery energy storage system?

The first, and the topic of an earlier article, is the general contracting structure. Developers of battery energy storage system, or BESS, projects are using a multi-contractor, split-scope contracting structure instead of the more traditional single-contractor, turnkey approach. (See "Battery Purchase Contracts" in the December 2021 NewsWire.).

Should a battery procurement contract aggregate liability in a collective project?

For example, if a developer has a number of projects supplying battery storage under a single offtake contract, then it might prefer a single battery procurement contract aggregating liability in the collective project, given that liability under the offtake contract may be connected for failure to develop the collective project.

How can battery storage improve solar energy production?

Note rising interest in value streams that are locally realized, e.g., time-shifting to balance rising distributed energy resources (DERs) locally. Battery storage can prevent solar over-production, while facilitating local high-renewables goals. It also may sometimes defer the need for a distribution upgrade (non-wires alternative).

What are the challenges of procurement for utility-side storage & solar-plus projects?

The challenges of procurement for utility-side storage and solar-plus projects center largely on early-stage decisions: defining the top-priority use case, but also exploring ways to get more value out of the project and to prepare for market changes over its life.

Who led the energy storage project in North Carolina?

Cliburn and Associates, LLC, led the project team, including North Carolina Clean Energy Technology Center (NCCETC), Cobb Electric Membership Corporation, Kit Carson Electric Cooperative, United Power, and stakeholders from other co-ops and public power utilities and wholesale suppliers, market experts, and the energy storage industry.

## Energy Storage Battery Procurement Project

### Ontario awards 739MW of battery storage contracts

Rendering of Oneida, the government-backed 250MW/1,000MWh project by NRStor and Northland Power, which is being contracted for separately to the new ...
