

SolarMax Energy Systems

Energy storage battery container liquid cooling system composition

Overview

Liquid cooling uses a circulating coolant, often a water-glycol mixture, through heat exchangers attached directly to battery modules. This approach rapidly removes heat from the cells and transports it away, maintaining uniform temperatures across the entire pack.

Energy storage battery container liquid cooling system composition

5.01MWh User Manual for liquid-cooled ESS

The energy storage system of this product adopts integrated design, which integrates the energy storage battery cluster and battery management system into a 20-foot container, which ...
