

## SolarMax Energy Systems

# Energy storage flywheel system power conversion

## Overview

---

In , operates in a flywheel storage power plant with 200 flywheels of 25 kWh capacity and 100 kW of power. Ganged together this gives 5 MWh capacity and 20 MW of power. The units operate at a peak speed at 15,000 rpm. The rotor flywheel consists of wound fibers which are filled with resin. The installation is intended primarily for frequency c.

Flywheel energy storage technology uses reversible bidirectional motors (electric motor/generator) to facilitate the conversion between electrical energy and the mechanical energy of a high-speed rotating flywheel.
