

SolarMax Energy Systems

Energy storage power station project construction labor volume

Overview

How much does the Goldendale energy storage project cost?

The Goldendale Energy Storage Project has a head of 2,400 feet and is expected to cost \$1,800/kW for C&I. Higher head for the project also reduced tunnel excavation costs due to the fact the pump/turbine centerline depth below the lower reservoir bottom decreased with increasing head (Miller, 2020a).

How much does a power plant cost?

Assuming these costs do not include substation/switchgear and transmission lines, the total costs are at the lower end of the \$2,500 to 3,500/kW range provided in conversations with developers (Manwaring et al., 2020; Miller, 2020a).

How much does a powerhouse cost?

The sum of the powerhouse C&I and electromechanical costs comes out to \$1,500/kW and is greater than the \$1,260/kW reported in the 2012 Black & Veatch report, but the total project cost is similar as the latter assumed indirect costs to be 55% of direct costs (Black & Veatch, 2012).

How much does a 10 hour power plant cost?

For a 10-hour plant, the reservoir cost was found to be \$104/kWh, higher than the \$77/kWh without contingency fee and very close to the \$103/kWh inclusive of contingency fees obtained from conversations with a PSH developer (Miller, 2020a).

What is the average MW capacity of a PSH plant?

The average MW capacity level for PSH plants has increased from 600 MW in 1973, to 1,400 MW in 1991, to > 2,000 MW today, with the current largest plant in the US being 3,000 MW (Bath County Pumped Storage Station, Virginia).

What is routine labor in a power plant?

Routine labor includes the regular maintenance of the equipment as recommended by the equipment manufacturers. This includes maintenance of pumps, compressors, transformers, instruments, controls, and valves. The power plant's typical design is such that routine labor activities do not require a plant outage.
