

SolarMax Energy Systems

Energy storage project distribution in the Philippines

Overview

What is the future of energy storage in the Philippines?

Under the Philippine energy scenario, peak demand is seen growing by 5.3 percent annually until 2028. Energy storage is stepping into the spotlight of the country's green transition, with more companies making bold investments to unlock its game-changing potential.

Why is the Philippines betting on battery energy storage systems?

The Philippines is betting on battery energy storage systems (BESS) to achieve its ambitious renewable energy (RE) targets and build a more sustainable energy future.

What is the impact of a solar power project in the Philippines?

The project has strong sustainability credentials, notably because of its impact in decarbonising the Philippines' energy system (SDG7), but also by generating power to support economic development (SDG8), creating more than 10,000 new jobs (SDG8), and facilitating local development (SDGs3+4).

How much battery storage capacity will the Philippines have?

As the Philippines gears up for the entry of more renewables into the grid, the government anticipates close to 2,000 MW of battery storage capacity to complement them. According to DOE data as of end-March, ESS projects with a combined capacity of 594 MW are committed to come online over the next three years.

How many Bess projects are there in the Philippines?

DOE data reveals 1,850 MW of committed BESS projects by 2030 and 1,951 MW of indicative projects by 2033, as of November 2024. The agency projects 330 MW of BESS capacity coming online this year alone. "We have seen that battery electricity storage is a crucial technology for the Philippines," the DOE said.

Is energy storage stepping into the green transition?

MANILA, Philippines — Energy storage is stepping into the spotlight of the country's green transition, with more companies making bold investments to unlock its game-changing potential. In a historic first, the Marcos administration is integrating energy storage system (ESS) components into the fourth round of the green energy auction or GEA-4.
