

## SolarMax Energy Systems

# Energy storage system home costs

## Overview

---

The cost of home battery storage has plummeted from over \$1,000 per kilowatt-hour (kWh) a decade ago to around \$200-400/kWh today, making residential energy storage increasingly accessible to homeowners. How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much does a storage system cost?

In general, for a 6-hour storage time, the estimated ICC of a high-head (700+ ft), large-capacity (500+ MW) project is \$2,200 to \$2,500/kW. For a project with similar head and installed capacity, the estimated ICC increases to \$2,400 to \$2,800/kW for an 8-hour storage time and \$2,600 to \$3,100/kW for a 10-hour storage time. Figure 4.3.

Why is energy storage cost important?

One of the key considerations when it comes to energy storage is cost. Energy storage cost plays a significant role in determining the viability and widespread adoption of renewable energy technologies. The cost of energy storage is a crucial aspect to consider when evaluating the feasibility and scalability of renewable energy systems.

What is the value of energy storage technologies?

The value of energy storage technologies lies in the services that they provide at different locations in the energy system, including heat to heat, electricity to electricity, electricity to heat, and heat to electricity applications. This roadmap therefore includes discussion of storage technologies in the context of these applications.

How much does a compressed air energy storage system cost?

The current cost of compressed air energy storage systems is between US\$500-1,000/kWh. Supercapacitor energy storage cost: Supercapacitor is a high-power density energy storage device, and its cost is mainly composed of hardware costs, including equipment such as capacitors and control systems.
