Export of energy storage lithium batteries

Overview

Which countries export lithium-ion batteries?

Chinese export destinations for lithium-ion (Li-ion) batteries are highly diversified, as the chart below shows. Significantly, Chinese Li-ion battery exports to the United States have risen sharply in recent months, reaching an all-time high of \$1.9 billion in December 2024.

Are Chinese Li-ion battery exports rising?

As measured in weight, Chinese Li-ion battery exports are rising. Chinese trade data shows that battery exports by weight have increased year-over-year, while their export value has declined. In 2024, the United States imported 923,000 tons, slightly less than the EU's 938,000 tons.

What are the leading energy storage battery companies in China?

Leading energy storage battery companies in China include BYD (002594.SZ), which is also the country's biggest electric vehicle maker, and CATL (300750.SZ).

Are Li-ion batteries cheaper than Ev batteries?

In contrast, the United States' more transparent data on Li-ion battery imports does distinguish between these categories, with most imports consisting of heavier battery energy storage systems. Significantly, per-kilogram battery costs are lower for battery energy storage systems than batteries for EVs.

Are Chinese lithium-ion batteries cheaper than US batteries?

Strikingly, the per-kilogram prices of Chinese lithium-ion batteries exported to the United States are lower than the same product sold to any other market.

Are battery energy storage systems cheaper than EVs?

Significantly, per-kilogram battery costs are lower for battery energy storage

systems than batteries for EVs. US BESS per-kilogram costs averaged \$19.7 through the first eleven months of the year, while batteries for EVs averaged \$28.8, according to US trade data.
