

SolarMax Energy Systems

Finland Sino-Singapore Energy Storage Project

114KWh ESS

Overview

What is the future of energy storage in Finland?

Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages. Mainly battery storage and thermal energy storages have been deployed so far. The share of renewable energy sources is growing rapidly in Finland.

Is energy storage the future of wind power generation in Finland?

Wind power generation is estimated to grow substantially in the future in Finland. Energy storage may provide the flexibility needed in the energy transition. Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages.

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.

Is energy storage a viable solution for the Finnish energy system?

This development forebodes a significant transition in the Finnish energy system, requiring new flexibility mechanisms to cope with this large share of generation from variable renewable energy sources. Energy storage is one solution that can provide this flexibility and is therefore expected to grow.

Why is Sungrow deploying a powertitan system in Finland?

This deployment supports Finland's growing reliance on wind and solar power, ensuring a more resilient and responsive energy grid. The PowerTitan system, Sungrow's flagship liquid-cooled BESS tailored for utility-scale applications, is

designed to withstand extreme weather conditions while maintaining high efficiency and reliability.

Is the energy system still working in Finland?

However, the energy system is still producing electricity to the national grid and DH to the Lempäälä area, while the BESSs participate in Fingrid's market for balancing the grid . Like the energy storage market, legislation related to energy storage is still developing in Finland.

Finland Sino-Singapore Energy Storage Project

60MWh Battery Storage Project to Support Finland's Renewable Energy

The project, one of the northernmost battery power plants in the world, will support Finland's renewable energy grid and is part of the FRV AmpTank joint venture.
