

SolarMax Energy Systems

Finnish customs energy storage container

Overview

Does Finland have energy storage?

This paper has provided a comprehensive review of the current status and developments of energy storage in Finland, and this information could prove useful in future modeling studies of the Finnish energy system that incorporate energy storages.

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.

Is energy storage a viable solution for the Finnish energy system?

This development forebodes a significant transition in the Finnish energy system, requiring new flexibility mechanisms to cope with this large share of generation from variable renewable energy sources. Energy storage is one solution that can provide this flexibility and is therefore expected to grow.

Is the energy system still working in Finland?

However, the energy system is still producing electricity to the national grid and DH to the Lempäälä area, while the BESSs participate in Fingrid's market for balancing the grid. Like the energy storage market, legislation related to energy storage is still developing in Finland.

How can a Finnish energy system be modeled?

The energy system could be modeled with a tool such as EnergyPLAN, considering the effects of a much larger share of RES in the Finnish energy system and the need for flexibility from ESSs. In collaboration with this study, a survey was conducted among the Finnish BRPs about their views and needs regarding ESSs.

What type of heating system is used in Finland?

In Finland, water heating systems and water boilers are common for heating residential houses. There is estimated to be 1800 MW of small-scale heat storage capacity, heated up with electricity, which can be controlled through smart meters . Larger TTES are commonly built in DH systems at CHP plants.
